detecting site-specific DNA recombination in eukaryotic cells. Recombination with Cre recombinase lacking heterologous protein-transduction domains is used for therapeutic site-specific recombination
                       This invention describes a novel method of site-specific DNA recombination in eukaryotic cells in vitro comprising using a bacteriophage P1 Cre recombinase that lacks heterologous protein-transduction domains. The invention also contains a reporter system

The modified recombinase can enter intact (not electrically or chemically treated) cells when added to culture medium and catalyzes recombination events in the nucleus with recombination rate over 50%, after a single application. The Cre-recombinase does not need to be supplied from nucleic acid introduced into the cell, so its effect is immediate but short-lived, limiting cytotoxic effects; eliminating the risk of nonspecific integration of DNA into the genome and providing quick results. This sequence represents the proviral plasmid Cre reporter construct SFrused in the method described in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               М

                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a construct which allows animals to be bred in CC captivity but renders them infertile in the wild by allowing reversible CC control over fertility and reproduction. The construct comprises a native CC promoter, a blocking DNA sequence contoured for and designed to abrogate a crucial gene's function or to cause its mis-expression, and a genetic CC switch to regulate controlled expression/repression of the blocker/gene CC knockout. The construct is useful for preventing embryogenesis or CC gametogenesis in animals by stably transforming an animal cell with the CC construct by microinjection, transfection or infection, where the CC construct by microinjection, transfection or infection, where the CC construct stably integrates into the genome by homologous recombination, CC and implanting the cell into a host organism, where a whole animal CC develops from the implanted cell. The present DNA sequence is plasmid CC oysters. The plasmid comprises oyster Hox gene under the under the CC control of Drosphila heat shock promoter (dHSP), red fluorescent protein
                                                                                          US-10-006-922A-12

                                                                                                                                                                                                                                                                                                                                                                                                          This invention describes a novel vector containing, at least, two CC composes DNA sequences that, through DNA exchange, induce a change in a CC gene present in the vector. The products of the invention are used to CC assess genotoxicity of compounds (e.g. components of foods, cosmetics and medicines), to determine susceptibility for development or progression of CC cancer, for analysis of (non-)conservative recombination processes, end CC joining and inactivating/reverting mutations, for characterization of CC selected genes with respect to maintenance or reduction of genetic compatibility, and to determine genetic (in) stability and recombinational or CC mutational frequency of cells, tissues or organisms. The vector allows an CC contine use), and can be used with a variety of eukaryotic cells and CC contine use), and can be used with a variety of eukaryotic cells and CC contine use), and can be used with a variety of eukaryotic cells and CC contine use), and can be used with a variety of eukaryotic cells and CC contine use), and can be used with a variety of eukaryotic cells and CC contine use), and can be used with a variety of eukaryotic cells and CC contine use) and can be used with a variety of eukaryotic cells and CC content and can be used with a variety of eukaryotic cells and CC content and can be used with a variety of eukaryotic cells and CC content and can be used with a variety of eukaryotic cells and CC content and can be used with a variety of eukaryotic cells and CC described in the disclosure of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Disclosure; Page 104-106; 106pp; German.

CC promoter, which is a constitutive promoter or an inducible promoter, e.g. can ovalbumin or a vitellogenin promoter. The vector further comprises a copoly a sequence, a conalbumin poly a sequence, operably linked to the transposase gene. The vector further comprises two stop codons operably comprises the second gene of interest is coperably linked to a second or third promoter, respectively. The first and a second gene of interest are operably linked to a second promoter. The vector further comprises an enhancer operably linked to the one or compressed in terest. The enhancer comprises at least a portion of an covalbumin enhancer. The vector further comprises an egg directing covalbumin enhancer. The vector further comprises an egg directing covalbumin enhancer, operably linked to the one or covalbumin enhancer. The vector further comprises an egg directing converting sequence, ovalbumin or ovomucoid signal sequence or vitellogenin contains such desired contains or molecules. They are also useful in treating Huntington's concerning the contains with desired the contains of the vector is called a concentral hypothyroidism. maple concerning the contains of the vector is called a concentral throughtyroidism. maple
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               21-JAN-2003;

       This sequence represents a new vector, pTnMod (Oval/Red)-Chicken, comprising a transposase gene operably linked to a first promoter and one or more gene of interest operably linked to a first promoter promoters, where the one or more genes of interest and their operably linked promoters are flanked by transposase insertion sequences recognized by the transposase and the first promoter comprises a modified Kozak sequence comprising ACCATG. The transposase is a Tn10 transposase and is modified in one to twenty of the first codons. The gene of interest in operably linked to a second promoter, which is a constitutive promoter. The vector further comprises a polya sequence, a conalbumin promoter. The vector further comprises a polya sequence, a conalbumin polya sequence, operably linked to the transposase gene. The vector further comprises a polya sequence gene.
                                                                                                                                                                                                        New vector comprising a transposase gene operably linked to a promoter, useful in treating Alzheimer's disease, breast cancer, phenylketonuria, autoimmune diseases, bacterial or viral infections or Types I and II
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       misc_feature

The first or second gene of interest is operably linked to a second CC or third promoter, respectively. The first and a second gene of interest CC are operably linked to a second promoter. The vector further comprises an CC enhancer operably linked to the one or more genes of interest. The CC ventor further comprises at least a portion of an ovalbumin enhancer. The CC ventor further comprises an egg directing sequence, ovalbumin or CC producing stransgenic animals with desired proteins or molecules. They are CC linked to the one or more genes of interest. The vector is useful in CC producing transgenic animals with desired proteins or molecules. They are CC also useful in treating Huntington's disease, alpha-1-antitrypsin CC deficiency, Alzheimer's disease, breast cancer, cystic fibrosis, CC galactosaemia, congenital hypothyroidism, maple syrup urine disease, CC optiz Syndrome, autoimmune diseases, shipping fever in cattle, mastitis, CC bacterial or viral infections or Types I and II diabetes.

```

This sequence represents a new vector, pTnMod (CMV/Red), comprising a transposase gene operably linked to a first promoter and one or more gene of interest operably linked to one or more additional promoters, where the one or more genes of interest and their operably linked promoters are flanked by transposase insertion sequences recognized by the transposase and the first promoter comprises a modified Kozak sequence comprising ACCATG. The transposase is a Thio transposase and is modified in one to twenty of the first codons. The gene of interest in operably linked to a second promoter, which is a constitutive promoter or an inducible

Example 2; SEQ ID NO 2; 150pp; English

second promoter, which is a constitutive promoter or an promoter, e.g. an ovalbumin or a vitellogenin promoter.

The vector further comprises two stop codons operably linked to the transposase gene. The first or second gene of interest is operably linked to a second or third promoter, second gene cof interest is operably linked to a second or third promoter, second gene cof interest are operably linked to a second promoter. The vector further comprises an enhancer operably linked to the one or more genes of interest. The enhancer comprises at cleast a portion of an ovalbumin enhancer. The vector further comprises an egg directing sequence, ovalbumin or ovomucoid signal sequence or vitellogenin targeting sequence, operably linked to the one or more genes of interest. The vector is useful in producing transgenic animals with desired proteins or molecules. They are also useful in treating completing transpenic animals with desired proteins or molecules. They are also useful in treating that the proteins of disease, alpha-1-antitrypsin deficiency, Alzheimer's compenital hypothyroidism, maple syrup urine disease, neurofibromatosis, phenylketomuria, sickle cell disease, Smith-Lemi-Optiz Syndrome, autoimmune diseases, shipping fever in cattle, mastitis, bacterial or viral infections or Types I and II diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       5785

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                占
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           吊
                                                                             US-10-006-922A-12
                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to DNA (I) containing either sequence ABA95905 or sequence ABA95906 encoding a yeast optimised Red Fluorescent Protein (PRFP). (I) are used to express red fluorescent protein (RFP) in eukaryotes, especially yeast, especially Saccharomyces cerevisiae and plants, especially dicotyledonous plants including Nicotiana tabacum or Arabidopsis thaliana and also in prokaryotes, especially bacteria, especially Bacherichia coli. RFP is useful in the same way as green fluorescent protein but is more generally applicable in modern biotechnology. (I) are optimised for expression in yeast and so generate RFP at higher levels with stronger fluorescence and thus lowers the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CDS

> New DNA encoding red fluorescent protein, useful as marker in biotechnology, has sequence optimized for expression in eukaryotes, especially yeast or plants.

Disclosure; Page 11; 19pp; German.

The invention relates to DNA (I) containing either sequence ABA95905 or sequence ABA95906 encoding a yeast optimised Red Fluorescent Protein (VRFP). (I) are used to express red fluorescent protein (RFP) in eukaryotes, especially yeast, especially Saccharomyces cerevisiae and plants, especially dicotyledonous plants including Nicotiana tabacum or Arabidopsis thaliana and also in prokaryotes, especially bacteria, especially Bacherichia coli. RFP is useful in the same way as green fluorescent protein but is more generally applicable in modern biotechnology. (I) are optimised for expression in yeast and so generate RFP at higher levels with stronger fluorescence and thus lowers the detection limit and gives a better signal-to-noise ratio. The present sequence is that of an RNA sequence corresponding to the yeast optimised RFP encoding cDNA given as SEQ ID NO 2 (ABA95906)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 δ
The invention relates to a fluorescent timer protein having an emission CC spectrum that changes over time after synthesis from a first wavelength CC to a second wavelength. The fluorescent timer proteins are useful in CC monitoring the activity of a promoter, determining the age of a protein, CC identifying an agent that modulates the activity of a promoter and in CC enriching a population of cells comprising a fluorescent timer protein. CC expression during development of a multicellular organism or during CC expression during development of a multicellular organism or during CC expression during intracellular protein movement or translocation, CC promoter activity, as a reporter to serve as a read-out of promoter cC activity, monitoring intracellular protein movement or translocation, CC protein trafficking, or protein stability, to investigate temporal CC aspects of the activity of a regulatory element, for determining cell CC aspects of the activity of a regulatory element, for determining cell CC in distinguishing between newly formed and pre-existing structures, e.g. CC membrane junctions and extracellular matrix components. The fluorescent timer proteins may further be used to investigations where photobleaching techniques are employed, as detectable labels, as selectable markers, as biosensors in protease cleavage assays, and as second messenger detectors. The nucleic acids can be used to generate transgenic, non-human plants or animals or site-specific gene modifications in cell lines. The present sequence is a cDNA encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New fluorescent timer proteins comprising an emission spectrum that changes over time from a first wavelength to a second wavelength, us for monitoring intracellular protein movement, translocation, traffior stability.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Disclosure;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention provides a nucleic acid encoding functional red fluorescent (I) that differs from the sequence of an Anthozoan red fluorescent protein by at least one amino acid substitution, and with different fluorescent properties. The red fluorescent protein of the convention can be expressed by standard recombinant methodology. (II) are used a fluorescent markers and FRET partners. It is used for identifying protein-protein interactions. (II) is also suitable for multiplexed protein-protein analysis and FRET-based applications using existing Aequorea fluorescent proteins. (II) has improved brightness, reduced spectral cross talk, and is rapidly and efficiently expressed in mammalian cells. The key mutations in the encoding nucleic acids provide improved folding, brightness, and create (II) with sharper, more defined excitation and emission peaks when expressed in mammalian cells. The present sequence represents the nucleotide sequence of an improved synthetic mutant of an anthozoan fluorescent protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Proteins for Fluorescence Resonance Energy Transfer (FRET) comprise functional red fluorescent proteins, and the encoding nucleic acids, with key mutations for improving the proteins function.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           13-FEB-2001, 2001WO-US004625
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WO200162919-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Fluorescent

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention provides an isolated brain-derived neurotrophic factor (BDNF) gene promoter and its associated nucleic acid constructs. The invention is useful for screening a number of substances for their ability to influence the production of BDNF in living organisms. The present sequence is zebrafish brain-derived neurotrophic factor (BDNF) gene construct DNA. This sequence is used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 1;

                                   The invention describes a DNA molecule comprising at least 163 consecutive nucleotide base pairs of the 3' terminal region beginning at the 3' terminal base pair, and at least 125 consecutive nucleotide base pairs of the 5' terminal region beginning at the 5'terminal base pair, of the piggyBac molecule. The region extends from the restriction site SacI to the end of the piggyBac molecule. The DNA molecule in the transposon piggyBac is useful for transferring genes into host cells or embryos for transforming the cells of embryos. The transformed cells or embryos are useful for developing or making transgenic organisms. This sequence represents plasmid used in the creation of minimal sequence eukaryotic
                                                                                                                                                                                                                                 New DNA molecule in the transposon piggyBac, useful for transferring genes into host cells or embryos for transforming the cells of embryos
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Synthetic.

This invention describes a novel nucleic acid (I) comprising: (i) at least one functional region (Ia) from the regulatory region of the alphasmooth muscle actin (SMA) gene and (ii) at least one additional functional sequence (Ib) operably linked to (Ia). The products of the invention can be used for preparing genetically modified eukaryotic cells or organisms, for isolation and screening of smooth muscle cells, myofibroblasts or related cells, and for manipulation of gene expression and/or cell function in smooth muscle cell or myofibroblasts or related cells, and for modulation of gene expression and/or cell function in smooth muscle cell or myofibroblasts, particularly for gene therapy. Component (Ia) provides cell-type- or differentiation-specific expression or modulation of genes. This sequence represents a DNA fragment of red fluorescent protein (EGFP) which can be used as a reporter molecule under the control of the alpha-SMA described
                                                                                                                                                                                                                                                                                                                                                                                  New nucleic acid containing regulatory region of the smooth muscle actin gene, useful e.g. for manipulating gene expression in smooth muscle
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        11-JUL-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC first mutation fluorescent protein mutant has an optical property that cd differs relative to the corresponding optical property produced by the cc wild-type red or green fluorescent protein. (I) is useful for detecting expression of gene. The polynucleotide (II) encoding (I) is useful for cettecting expression of a gene which involves introducing (II) into a cell or organism, allowing the cell to replicate, and detecting expression of the nucleic acid by emission of fluorescent light. The cexpression of the nucleic acid expression of fluorescent light. The cexpression of the nucleic acid expression of fluorescent light. The contains (II). (I) is useful as a marker for detecting expression of a gene, in biochemical assays, and as reagents. (I) is also useful in mitrolipection assays, and as taxonomic markers such as in mRNA committee in diagnostic kits, coloured food additives, and committies ingredients. (I) is useful in research for up or down cregulation, to monitor promoter activity, to allow longer term monitoring and to localise proteins. (I) has enhanced properties such as concained such as encodes RedI, a mutant of the red fluorescent protein isolated from an aquatic species believed to be either an Actinodiscus or Discosoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ્ફ
The invention describes a first mutant fluorescent protein (I) comprising CC an amino acid sequence that differs from that of a corresponding wild-crype red fluorescent protein by an amino acid substitution, where the CC differs mutation fluorescent protein mutant has an optical property that CC differs relative to the corresponding optical property produced by the CC wild-type red or green fluorescent protein. (I) is useful for detecting expression of gene. The polynucleotide (II) encoding (I) is useful for CC expression of gene. The polynucleotide (II) encoding (I) into a CC cell or organism, allowing the cell to replicate, and detecting expression of the nucleic acid by emission of fluorescent light. The CC expression of the nucleic acid expression is detected in vivo or in CC vitro. (II) is useful for regenerating an animal such as zebrafish CC which contains (II). (I) is useful as a marker for detecting expression of a gene, in biochemical assesys, and as reagents. (I) is also useful in manual such as in manual such as in manual contains of genetics, as in vivo markers such as in manual such as in manual contains.)
                                                                                                                                                                                                                                                                                                          New first mutant fluorescent protein having an optical property relatively different to a corresponding optical property produced wild-type red or green fluorescent protein, useful for detecting expression of a gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  fluorescent protein; red fluorescent protein; green fluorescent protein; gene expression detection; regeneration; multiple labeling system; in vivo marker; microinjection assay; taxonomic marker; colour indicator; food additive; cosmetic; Actinodiscus; Discosoma; gene; ds; mutant;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (GIBB/)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                colour indicators in diagnostic kits, coloured food additives, and cosmetics ingredients. (I) is useful in research for up or down regulation, to monitor promoter activity, to allow longer term monitoring and to localise proteins. (I) has enhanced properties such as substantially enhanced fluorescence and reduced toxicity. This sequence encodes RedII, a mutant of the red fluorescent protein isolated from an aquatic species believed to be either an Actinodiscus or Discosoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 711 BP;

The invention relates to mutant red and green fluorescent proteins which they higher fluorescent intensities compared to the wild-type proteins of from which they are derived. The invention also discloses nucleic acids encoding the mutant fluorescent proteins, and transgenic animals of the invention, Red I (ADZ84223) and Red II (ADZ84225), are derived from a novel wild-type RFP (referred to as Ac/DBRP) isolated from a comparising such a nucleic acid. The mutant red fluorescent proteins (RFP) of the invention, Red I (ADZ84223) and Red II (ADZ84225), are derived from a novel wild-type RFP (referred to as Ac/DBRP) isolated from a compared to be either an Actinodiscus or Discosoma (C (ADZ84227)) and Green (ADZ84229), are derived from a novel wild-type GFP (Rnown as McGFP) isolated from the great star coral Montastraea covernosa. The Ac/DBRPP and McGFP mutants were obtained by subjecting the wild-type Ac/DBRPP and McGFP cDNAs to low-stringency PCR to introduce covertors, and selecting the transformed bacteria having higher relative fluorescence compared to those expressing the wild-type proteins. The compared to those expressing the wild-type proteins. The compared to those expressing the wild-type proteins. The coral proteins of the invention may be used in a wide range of agene of interest, or can be used as markers for detecting the expression can general proteins, or can be used as in vivo markers in multiple capression systems (e.g., as components of fusion proteins), in multiple colored food additives and as color indicators in diagnostic kits, as colored cordarian genetics, as color indicators in diagnostic kits, as colored cordarian genetics, as color indicators in diagnostic kits, as colored cordarian sentence of the mutant Actinodiscus/Discosoma red fluorescent cordarian sentence of the mutant 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel mutant fluorescent protein comprising amino acid sequence that differs from wild-type red or green fluorescent protein by amino acid substitutions, useful as markers for detecting desired gene expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CDS

The invention relates to mutant red and green fluorescent proteins which they are derived. The invention also discloses nucleic acids encoding the mutant fluorescent proteins, and transgenic animals comprising such a nucleic acid. The mutant red fluorescent proteins (RFP) of the invention, Red I (ADZ84223) and Red II (ADZ84225), are derived from a novel wild-type RFP (referred to as Ac/DBRFP) isolated from a gencies, while the mutant green fluorescent proteins (RFP) (RDZ84227) and Green (ADZ84223), are derived from a novel wild-type RFP (referred to as Ac/DBRFP) isolated from a gencies, while the mutant green fluorescent proteins (GFP), Green I (CADZ84227) and Green (ADZ84229), are derived from a novel wild-type GFP (Known as MGGFP) isolated from the great star coral Montastraea (CADZ84227) and GFPP and MGGFP cDNAs to low-stringency PCR to introduce vectors, and selecting the PCR products into bacterial expression core fluorescence compared to those expressing the wild-type proteins. The mutant fluorescent proteins of the invention may be used in a wide range of a gene of interest, or can be used as in vivo markers in mRNA (CADZ8423) are useful as markers for detecting the expression of a gene of interest, or can be used as in vivo markers in mRNA (CADZ8425) as color indicators in diagnostic kits, as colored food additionally be used as taxonomic markers for studies of condardistives and as cosmetic ingredients. They present sequence (CADZ8425) as color indicators in diagnostic kits, as colored food additives and as cosmetic ingredients. The present sequence (CADZ8425) as color indicators in diagnostic kits, as colored to mote mutant Actinodiscus/Discosoma red fluorescent protein Red II. Red II was found to have a fluorescent intensity at least to the mutant RFP Red I (ADZ8423).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel mutant fluorescent protein comprising amino acid sequence that differs from wild-type red or green fluorescent protein by amino acid substitutions, useful as markers for detecting desired gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CDS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to nucleic acid molecules encoding non-aggregating chromo/fluorescent proteins and their mutants. Chromo/fluoro proteins are useful in analyte detection assays, as colouring agents, as markers in recombinant DNA applications, as sunscreens or filters, in fluorescence resonance energy transfer (FRET) applications, as biosensors in prokaryotic and eukaryotic cells, in screening assays, as second messenger detectors, in fluorescence activated cell sorting applications, in protease cleavage assays or as fluorescent timers. The present sequence is Discosoma sp. drFP583 (NFP-6) mutant DNA of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New nucleic acid encoding a non-aggregating chromo-
of an aggregating Cnidarian chromo- or fluorescent p

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            吊
The invention relates to a fluorescent timer protein having an emission spectrum that changes over time after synthesis from a first wavelength to a second wavelength. The fluorescent timer proteins are useful in monitoring the activity of a promoter, determining the age of a protein, identifying an agent that modulates the activity of a promoter and in enriching a population of cells comprising a fluorescent timer protein. The fluorescent timer protein are also useful for assessing gene
                                                                                                                                                                                                                                                                                                New fluorescent timer proteins comprising an emission spectrum that changes over time from a first wavelength to a second wavelength, useful for monitoring intracellular protein movement, translocation, trafficking
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Fluorescent timer protein; protein promoter activity; gene expression; protein age; mutant; E5NA; ss.

cc expression during development of a multicellular organism or during cellular differentiation, in response to a drug or other inducer of component activity, as a reporter to serve as a read-out of promoter cc activity, monitoring intracellular protein movement or translocation, cc protein trafficking, or protein stability, to investigate temporal cc aspects of the activity of a regulatory element, for determining cell cf fate during development and organ remodelling, in spatial and temporal cc in distinguishing between newly formed and pre-existing structures, e.g. membrane junctions and extracellular matrix components. The fluorescent timer proteins may further be used to investigations where photoblacking techniques are employed, as detectable labels, as selectable markers, as biosensors in prokaryotic and eukaryotic cells, in protease cleavage cc assays, and as second messenger detectors. The nucleic acids can be used to generate transgenic, non-human plants or animals or site-specific gene modifications in cell lines. The present sequence is a cDNA encoding CC Discosoma sp. ESNA non-aggregating fluorescent timer protein derived from fluorescent timer protein derived from humanised wild-type Anthozoa CC R2A, K2E and K9T. E5 protein is derived from humanised wild-type Anthozoa CC protein drf9583 by substituting Val to Ala at 105 and Ser to Thr at 197 XX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  US-10-006-922A-12 (1-225) x AAD28209 (1-678)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Fluorescent protein; chromoprotein; protease cleavage assay; filter; fluorescence activated cell sorting application; fluorescent timer; biosensor; fluorescence resonance energy transfer application; FRET; colouring agent; recombinant DNA application; analyte detection assay;
                                                 The invention relates to nucleic acid molecules encoding non-aggregating chromo/fluorescent proteins and their mutants. Chromo/fluoro proteins are useful in analyte detection assays, as colouring agents, as markers in recombinant DNA applications, as sunscreens or filters, in fluorescence resonance energy transfer (FRET) applications, as biosensors in prokaryotic and eukaryotic cells, in screening assays, as second messenger detectors, in fluorescence activated cell sorting applications, in protease cleavage assays or as fluorescent timers. The present sequence is Discosoma sp. drFP583 (NFP-6) mutant DNA of the invention
                                                                                                                                                                                                                                                                                                                                                                                                   of an aggregating analyte detection
                                                                                                                                                                                                                                                                                                                                                                                                     New nucleic acid encoding a non-aggregating chromo- or fluorescent mutant of an aggregating Chidarian chromo- or fluorescent protein or mutant for analyte detection assays or fluorescence activated cell sorting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                20-FEB-2002; 2002WO-US005749
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Discosoma sp

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a novel method for suppressing the expression of CC a target gene in a plant cell, comprising introducing a short interfering CC RNA (siRNA) into the plant cell. The method for suppressing the CC expression of a target gene in a plant cell comprises: introducing a CC siRNA into the plant cell, where the siRNA is a double-stranded molecule with a first strand consisting of a nucleic acid sequence which is CC substantially complementary to a nucleic acid sequence which is CC and a second strand consisting of a nucleic acid sequence which is CC substantially complementary to the first strand, where the siRNA is CC capable of suppressing the expression of the target gene. The method, CC siRNA and composition are useful for suppressing expression of a target gene in a plant cell. Particularly, they are useful for suppressing or complementary to the first strand, where the method, CC siRNA and composition are useful for suppressing expression of a target gene in a plant cell. Particularly, they are useful for suppressing or complementary to the coding region (ACI) of the invention, CC siRNAs are targeted to the coding region (ACI) of the replication—CC siRNAs are targeted to the coding region (ACI) of the replication—CC siRNAs are targeted to the coding region of a gene used in the plant gene
                                                                                                                                                                                                                                                                                                                                                                                               US-10-006-922A-12 (1-225) x ADV96699 (1-747)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Suppressing germiniviral genes short interfering RNA into the

This sequence represents the construct UbCP-lox-mirMSOD2-EGFP-lox-RFP. In this construct, the Ubiquitin C promoter (UbCP) normally directs synthesis of the hairpin and EGFP. However, upon exposure to cre, the hairpin and EGFP re excised thus preventing hairpin expression, while the RFP gene is under the control of the UbCP. This sequence is a complementary vector to UbCP-lox-RFP-lox-mirMSOD2-EGFP. The construct of the invention comprises a U6 promoter operably linked to a shRNA encoding nucleic acid sequence. The construct further comprises a first loxP site upstream of the promoter and a second loxP site same orientation so that the promoter and encoding sequence, the loxP sites are in the same orientation so that the shRNA encoding sequence comprises a first stem-encoding portion, a loop-encoding portion, and a second stem-encoding portion, the loop-encoding portion a first loxP site operably linked to a transcription
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ADW43589
